2001	MRCP(UK), Royal College of Physicians, London
1998	MB BCh BAO, Queen’s University Belfast

H-index: 23, Peer-reviewed publications: 106, Supervised PhD students: 6

ESTRO

Personal

I was born and grew up in County Down, Northern Ireland and apart from a short time in living in the Netherlands and 3 years living in Australia, I have lived most of my life in Northern Ireland. I am married to Suzie, who is a General Practitioner, and we have 3 children aged 10 to 15. Away from work I enjoy hill walking, cycling, good music, playing the piano and a little bit of gardening.

Election statement

The strength of ESTRO comes from bringing together radiation therapy professionals from across Europe and the world to share best practice and collaborate on innovative research. I have held research and clinical leadership roles both in the UK and Australia. I have served in a range of roles for both the Royal College of Radiologist's London and the Royal Australian and New Zealand College of Radiologists, as well as serving as an External Examiner for the Faculty of Radiation of Radiation Oncology, Royal College of Surgeons of Ireland. I have a number of strong international collaborations and have supported the IAEA in a number of technical projects and led the IAEA's PERTAIN trial. In my leadership roles I enjoy supporting colleagues, bringing teams of people together, uniting them in a common purpose and by doing so, develop that group or organisation, driving it forward.

I am keen to bring my international leadership experience to the ESTRO Board for the benefit of the Society and ultimately for the benefit of our patients.
