**About us**

It is for the first time in the last 30 years, in Romania, that a children's hospital is being built from scratch. The uniqueness of the project is that it is entirely built by the civil society at the initiative and under the coordination of Dăruiește Viață / Give Life Association. Currently the project is supported by over 350.000 individual donors and over 4.000 companies and has gained a lot of international media coverage due to its uniqueness and famous supporters (such as Metallica, Juliette Binoche, Depeche Mode, numerous Ambassadors and public figures). Find out more about the project here and here. The Hospital will be a hospital of firsts, bringing Western treatment standards to Romania for the first time in a public hospital.

Once finished the Hospital will be donated to Marie Curie Hospital, to enter the public circuit, after a public-private partnership that will ensure its efficient management. Dăruiește Viață / Give Life Association is a local NGO who has invested in the last 10 years over 20 million € in medical projects in Romania such as: 20 clean rooms, modernizing adults and children oncology wings in several hospitals in the country, equipping dozens of other hospitals, the first laboratory for in-depth diagnostics of leukaemia in Timisoara and equipped a similar one in Bucharest, building a modular hospital for COVID-19 patients, as well as advocacy and educational initiatives.
